

IBM MQ for z/OS SMF Skills Workshop

AGENDA

Introduction to Queue Manager Internals (1 hr):

This session will walk customer through the internal functionality of a queue manager. Since admins interpret SMF data on a queue manager-level, this session will help customer understand the internal resource threads and storage facilities underpinning each queue manager.

Introduction to Interpreting SMF data for MQ on z/OS (1 hr):

This session will enable customer to recognize key metrics and the associated impact in their SMF 115 and 116 data. Recognizing KPIs will enable the team to identify where tuning can occur to improve MQ's performance.

Demonstration of how IBM does MQ SMF interpretation for customer environment (45 min):

This session will be a walk-through of the process IBM uses evaluate customer environments for IBM MQ health checks. IBM will demonstrate how the data gets from z/OS to readable and interpretable spreadsheets.

Optional Additional Sessions:

What's New in MQ

Queue Statistics Deep Dive
